

# SHALL WE HAVE SOME CLIP-AND-PASTE FUN?

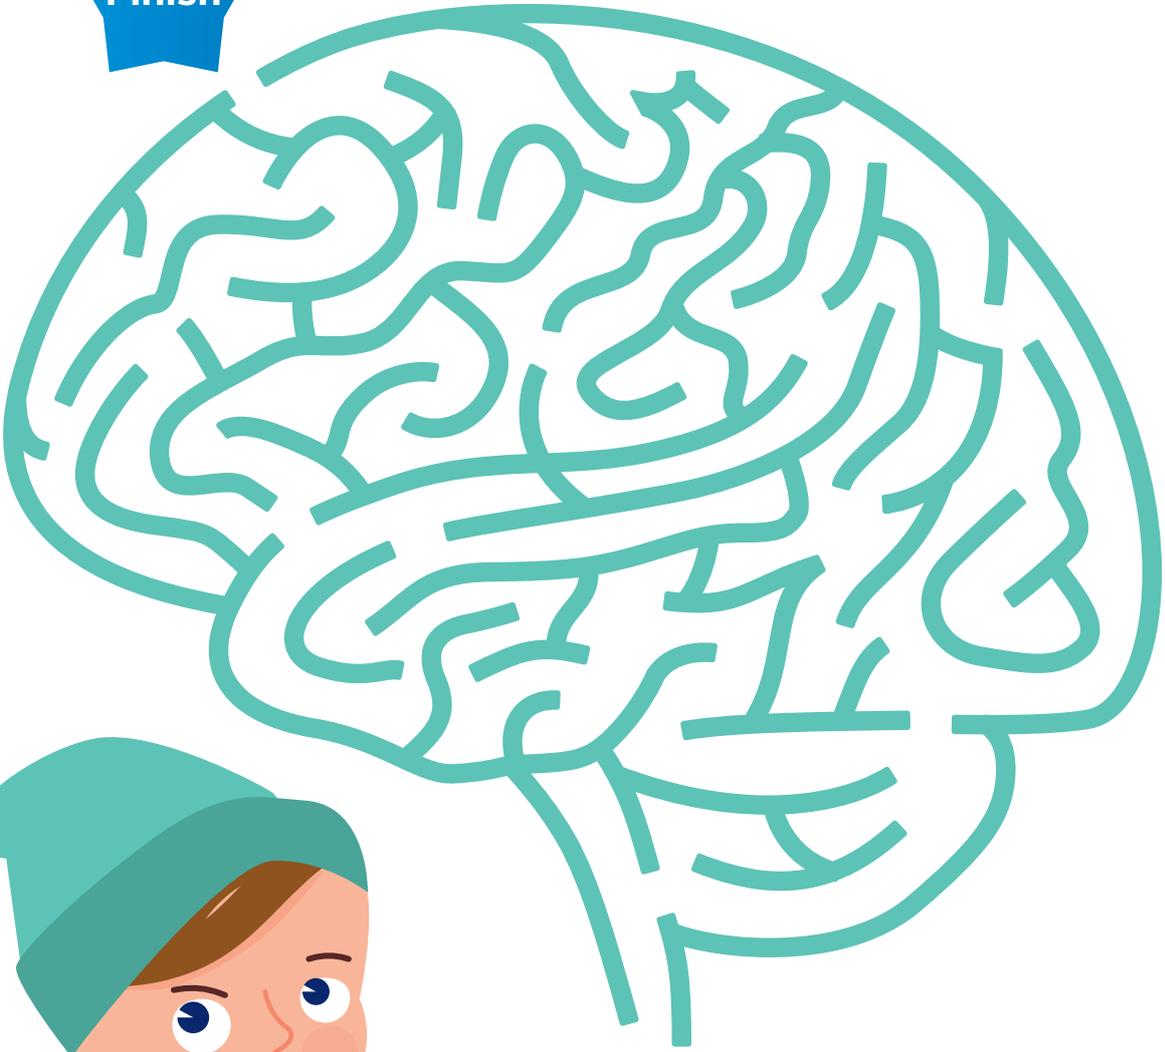

Here is a drawing of a brain. You use your brain to do everything that you do. When you have dementia, your brain cannot do the things that it usually can do. Colour in the brain, in a way that you think makes it look really nice. Afterwards, cut out the encircled drawings on the bottom of the page and glue them onto the brain. Now you can see all the things your brain does every single day.

# FIND A WAY OUT OF THE BRAIN MAZE

Are you good at finding your way around? Then try and find a way out of this brain maze. But be careful! There are many tricky wrong turns that get you lost. Use your pencil to draw the whole way, from the start to the finish. Good luck!

**Finish**

**Start**

# WHAT IS THAT?

Here are lots of things that people used long ago. Can you guess what they are? You can compete with each other by splitting into two groups. The group that makes the most correct guesses is the winner. Have a great game!

PS: If no one knows what the answer is, your teacher can find the correct answer in the guide for teachers.

## HINT

You use it when you want to eat cereal.

## HINT

You use it when you want to have tidy hair.

## HINT

You use it to repair clothing.

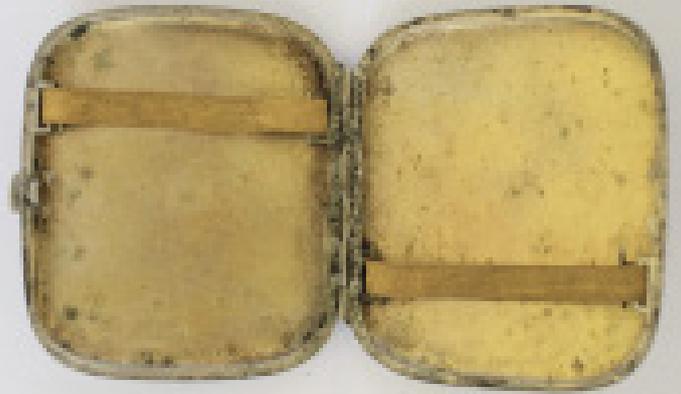

## HINT

You use it when you ride a bike.

## HINT

What you place inside it, you need to use fire to light.

## HINT

Men use this in the bathroom.

## HINT

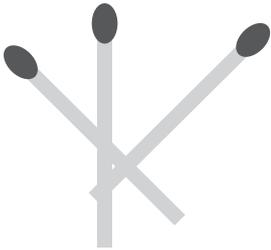

You use this when preparing food.

## HINT

You use this in the kitchen.

# GAMES YOUR GRANDMOTHER PLAYED AS A CHILD

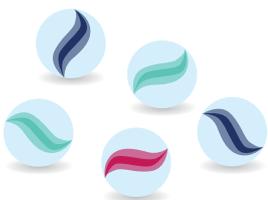

## 1) How many matchsticks am I holding game

This is a very old game that you can play with matchsticks. It is very simple to play. Each person in the game gets three matchsticks. They hold their hands behind their back with their matchsticks and hide either one, two or all three matchsticks in one closed hand. They then put out their closed hand. Each person then takes a turn to guess how many matchsticks are being held all together by everyone. Once you have chosen a number, it cannot be chosen by someone else. If you guess the right number, you are then allowed to take one of your matchsticks out of the game. In other words, there are fewer matchsticks in the game.

If no one guesses the right number, you just do another round. You take turns to make the first guess. The person who is the first to have no matches left is the winner.

*Pssttttt: You can also use small paper balls or stones instead of matchsticks. Just so long as you can hide them in one hand.*

## 2) Marble game

Children started to play with glass marbles in the 1930s. One of the games they played involved each child throwing one of their marbles into a circle. Then each child would take a turn at using another marble, which was called a 'shooter', to try and hit one of the marbles in the circle. If the player hit a marble that was already in the circle, the player was allowed to keep it (they would now remove this marble from the circle) and gained an extra turn. The game would carry on like this until the player no longer hit another marble. When this happened, the player would have to leave their 'shooter' marble in the circle. Then it was the next player's turn.

And like the player before them, if the new player hit a marble that was already in the circle, they could keep that marble (they too would now remove this marble from the circle) and gain an extra turn, until they no longer hit another marble. Then it would be the next player's turn .... and the game would continue like that. And the game is over when there are no marbles left to hit in the circle. It is best to play marbles on a flat floor.

*Pssttttt: You can also use centicubes or Plus-Plus shapes to play the game.*
